

Pachmayr **LO-SWING** Scope Mounts

GIVE HUNTING RIFLES GREATEST VERSATILITY WITH HIGHEST PRECISION

When your scope is mounted in a Lo-Swing Mount you get a sturdy, precise scope mounting plus instantaneous use of iron sights in a single, quick motion. The scope merely swings out of the way, yet returns to exact zero. No amount of swinging can alter your zero.

COMPARE THESE ADVANTAGES

With Any Other Scope Mount Regardless of Price!

● LOWEST POSSIBLE MOUNTING

A Lo-Swing mount puts a scope where it should be . . . as low as possible over the receiver. The swing feature permits this important advantage over any other mount, and gives instant use of iron sights.

● LATCHED IN LOW POSITION

A latch is built into the Lo-Swing mount, holding the scope in firing position, but allowing you to instantly swing scope out of the way.

● INSTANT USE OF IRON SIGHTS

If your scope is rendered ineffective for any reason, or if an opportunity for a shot occurs at exceptionally short range when a scope makes it difficult to get on the game quickly . . . your Lo-Swing permits shooting with iron sights.

● TOP CLIP LOADING

By simply and quickly swinging the scope out of the way, you can clip load instantly . . . then snap the scope back in place again for immediate scope use.

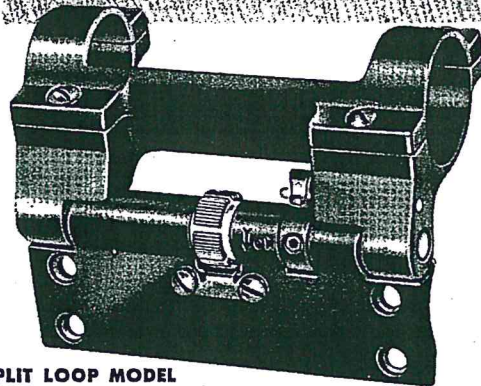

● RIGID

The base of the Lo-Swing is form fit for all receivers. Contact points between upper and base mount parts are hardened and ground 60° male and female cones. Recoil is parallel to bore, not affecting scope position. Scope swings about the axis of the mount pivot points keeping scope accurately in line at all times.

● VERSATILE

Your rifle becomes much more flexible when you use a Lo-Swing mount. You have all the precision of old-fashioned one-piece mounts plus the added advantage of the swing feature.

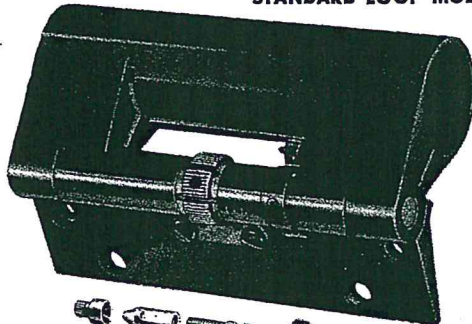

FITS ALL POPULAR GUNS AND SCOPES

SPLIT LOOP MODEL

LO-SWING MOUNT accommodates Challenger, Unertl, Weaver "K" series, and all foreign scopes with 1" to 1.043" tube diameter with windage and elevation adjustments. All other scopes are accommodated by Standard Loop Lo-Swing.

STANDARD LOOP MODEL

SCOPE DETACHES IN 10 SECONDS

The internal parts of the Lo-Swing Mount are shown above. The knurled finger nut extends or retracts the male cone contained in the lower or base mount. This cone extends into the matching cone in the upper mount. A fixed male cone in the upper mount also fits into a matching cone on the lower mount, thus providing precision centers of attachment.

By retracting the lower base mount cone, the scope in the upper mount is completely removed in about 10 seconds or replaced in the same time.

Swings on Centers

Always in Perfect Alignment

Operates Like a Lathe — It Must Swing True

The same method used for the finest barrel grinding is used in the Lo-Swing Mount — no matter how many times you swing the scope aside to remove the cone and upper mount, it always comes back to "zero" because it is mechanically impossible to do otherwise.

only with LO-SWING

Your scope is in a natural shooting position when mounted with a Lo-Swing. The scope mount is in the lowest possible position. With a Lo-Swing you're on the target faster and more accurately.

HOLDS ZERO SETTING

No matter how many times you swing the scope aside, or remove the scope from your rifle, when the scope is back in shooting position it is on positive "zero."

GUARANTEE

Lo-Swing Scope Mounts are unconditionally guaranteed as to quality and workmanship, providing the entire mount is returned within 1 year from date of purchase. Guarantee is null and void if mount shows evidence, to our satisfaction, of tampering, attempted alteration or damage during usage.
